- I could not figure out the timeout limit and get it working properly. I tried an example of something like this but it I wasn't able to figure out how to suspend the account in the same statement.

```
if (isset($_SESSION['LAST_ACTIVITY']) && (time() - $_SESSION['LAST_ACTIVITY']  
> 1800)) {  
    // last request was more than 30 minutes ago  
    session_unset();    // unset $_SESSION variable for the run-time  
    session_destroy();  // destroy session data in storage  
}  
$_SESSION['LAST_ACTIVITY'] = time();
```
